Features

- An SYDFE.-3X control system is used for the electro-hydraulic control of swivel angle, pressure and power (partially optional, see pages 4 and 7) of an axial piston variable displacement pump.
- The control system consists of the following components:
- Axial piston variable displacement pump A10VSO.../32
 - VT-DFP.-2X proportional valve as pilot valve including inductive position transducer for valve position detecting. With versions SYDFEE and SYDFEC, the pilot valve contains electronics for system control.
 - For SYDFE1: External control electronics VT 5041-3X for performing all electric functions necessary for the SYDFE1-3X (separate order)
 - Position transducer for detecting the swivel angle
 - Pressure transducer with suitable signal level and dynamics (optionally HM 16, otherwise separate order)
 - Preload valve with integrated pressure relief function SYDZ (optional)

¹⁾ Type SYDFEn-3X is described in data sheet 62241.

Schematic diagram: SYDFE1-3X, actuating system supplied internally

1) Separate order

2) Optional

Schematic diagram: SYDFEE-3X, SYDFEC-3X, actuating system supplied internally

- ¹⁾ When using the pressure transducer HM 16:
 Installation in P (pump) or MP1 (preload valve) in connection with electronics version "actual pressure value input F".
 When using an external pressure transducer:
 Installation in the P1 line (preferably close to the actuator) and electrical connection via central connector.
 When using a preload valve, the pressure transducer is to be connected to P1 or MP1.

Schematic diagram: SYDFE....-3X, actuating system supplied externally

1) The use of an anti-cavitation valve (check valve with 0.2 bar spring) is essential in order to prevent dry-running in case of an error.

3) Maximum pressure limitation must be provided by the customer!

4) Observe the upper limit for the external pilot oil pressure (see operating instructions). Recommendation: 20 bar absolute.

Pressure transducer	Mounting options	Comment
HM 16	P	Only in connection with actual pressure value input "F"
HM 20 / HM 17	P1	preferably close to the actuator

Important notes on external supply:

- In the case of an actuating system with external supply, the pump will - in case of voltage failure - not switch to zero stroke but to the negative stop (displacement of 100 % flow from the system to the tank).
- With an active fault message, it is imperative that the machine control reacts (e.g. switching off the drive motor of the pump, interrupting the external supply of the actuating system).
- The command values for pressure and flow must always be greater than zero ($p_{command} \geq 3 \text{ bar}$, $\alpha_{command} \geq 5 \%$) as due to drift or tolerances, there is no exact "zero" pressure or "zero" swivel angle. Under unfavorable conditions, smaller command value provisions can lead to cavitation.
- The actual pressure value must not be less than 10 bar for more than 10 minutes (lubrication).

Technical data (for applications outside these parameters, please consult us!)

Closed-loop control quality

- Notices:
- The specified values are only valid when using the system-related components specified in this data sheet.
 - At pressures < 20 bar, higher tolerances have to be anticipated due to lower actuating forces.

	Swivel angle control	Closed-loop pressure control ¹⁾
Linearity tolerance	≤ 1.0 %	≤ 1.5 % (≤ 1.0 % ²⁾)
Temperature error	≤ 0.5 % / 10 K	≤ 0.5 % / 10 K
Hysteresis	≤ 0.2 %	≤ 0.2 %
Repeatability	≤ 0.2 %	≤ 0.2 %

¹⁾ Without considering the pump pulsation
²⁾ With SYDFEC using the integrated calibration function

Transition function with pressure command value step with spool design "A"

The specified curve shapes and control times refer to a drive speed of 1500 1/min and are only reached with an optimization of the pressure controller.

$T_{95\%}$ in ms with a connected hydraulic fluid volume (lines and actuators)

Hydraulic fluid volume	$T_{95\%}$
< 5 l	150 ms
5 – 10 l	200 ms
15 – 25 l	250 ms

For pressures up to 40 bar, the values of the response times are larger.

Accessories for through-drives

With the introduction of A10VSO, series 32, a so-called universal through-drive for combining several pump stages is used. The required components can be seen from the following table and are to be ordered separately.

The following conditions apply to the attachment pumps listed in the table:

- SYDFE and A10VSO with shaft S or R
- PGH with shaft R, flange U2, see data sheet 10223
- PGF3 with shaft J, flange U2, see data sheet 10213
- AZPF with shaft R, front cover R, see data sheet 10089

Note also that the flange and the through-drive (see ordering code on page 2) match. Check in the current data sheet of the gear pump whether the shaft ends have the specified dimensions.

Project planning information

- Always shield command and actual value lines.
- The distance to aerial lines or radios must be at least 1 m.
- Do not lay signal lines close to power cables.
- For supplementary notices on the SYDFE control system, see the operating instructions (see section "More information about this control system" on this page).
